

You're just what we've been looking for.

You know that little things make a difference. And at UFA, it's the little things that have helped us become Alberta's largest agricultural retailer. And we didn't become a dynamic company meeting the needs of progressive farmers, rural customers and rural businesses without taking care of the details.

SENIOR IT AUDITOR

Position # HR10-257

Calgary, AB

Reporting to the Director, Internal Auditor, you are responsible for performing information systems audit work throughout UFA and are also responsible for supervising other employees. Other responsibilities may include: having the ability to work in ambiguous situations for which they will need to establish criteria, define work protocols, and structure assignments; perform, in partnership with IT management, and annual IT Internal Audit Risk Assessment, to contribute to the development of Internal Audit's Annual Work Plan as well as maintain effective communication with the Director, Internal Auditor; have extensive information systems audit experience, project management skills, and supervisory skills necessary to produce information systems audit work, which conforms to professional standards; and must be able to fulfill duties with minimal supervision.

Qualifications: You have a Bachelor's degree in Computer Science, Information Technology, Accounting or Business Administration with extensive information system audit experience in sophisticated technology environments, audit techniques, network security, technology infrastructure, software development and project management or equivalent. Professional Accounting Designation would be considered an asset (CMA, CGA, CA). Possession of or willingness to pursue professional certification such as CISA/CISM along with extensive experience assessing IT security and technical risks, and auditing common industry operating systems, business applications and database management systems. You have an extensive knowledge of database structures, mainframe, client server, local and wide area networks and related systems, network system design, capacity planning, operations methodology, error detection/resolution techniques, quality assurance techniques, and IT implementation and management methodologies. Demonstrated understanding and knowledge of concepts related to information system audit, including security and control risks, change management, information security, business recovery, and network technology. You have effective interpersonal skills, superior verbal and written communications skills, and strong analytical ability along with critical thinking skills. Periodic international travel may be required.
